PEDIDO DE TAMPONES

Estimado cliente,

para facilitarles el pedido de nuestros tampones, quisiéramos darles unas informaciones importantes! Les rogamos nos comuniquen tres detalles para elegir exactamente el tampón de impresión:
= número de código de 6 dígitos: _____

Calidad de silicona

Grado de dureza

Número de forma (Número de código de 6 dígitos del tampón ilustrado)

Ejemplo de pedido:

Calidad de silicona: 05

Grado de dureza: 2

Número de forma: 003

= Código.: 052003

(Bestell-Nr.: . . . XXX)

HP = base de madera o
AP = base de aluminio

Indicado si se representa la forma del tampón fundido en lugar del tapón de silicona.

Calidad de silicona

Suministramos tampones de impresión en cuatro calidades de silicona:

05= calidad 1- masa de silicona amarillenta . . . = calidad standard

06 = calidad 2- masa de silicona blanca = para tintas agresivas, buena estabilidad mecánica

07 = calidad 4- masa de silicona azul = calidad antiestática

08 = calidad 3- masa de silicona pardo-rojiza . . . = dureza Shore constante durante años, muy buena estabilidad mecánica

Para aplicaciones especiales, p.e. barnizar superficies, les ofrecemos la calidad 3 también como tampones "super secos".

Al pedir, sírvase indicar "modelo super seco".

Grado de dureza

El grado de dureza se indica en "shore" A y se indica en la zona inferior señalando diferentes coloraciones de las bases de madera o de aluminio:

Grado de dureza 2 = Color AZUL	approx. 1 Shore	piezas extremo delicadas	en calidad 1,3,4.
Grado de dureza 3 = Color ROJO	approx. 3 Shore	piezas delicadas	en calidad 1,3,4.
Grado de dureza 4 = Color VERDE	approx. 6 Shore	dureza standard	en calidad 1,2,3,4.
Grado de dureza 5 = Color BLANCO	approx. 12 Shore	para superficies irregulares	en calidad 1,2,3,4.
Grado de dureza 6 = Color GRIS	approx. 18 Shore	para tampones planos	en calidad 2,3,4.
		y grandes superficies	

Nota: la dureza aumenta con el índice de "shore".
